Chick Care Sheet

411

- 1) Never let the water run out
- 2) Try to make sure the food is consumed shortly before nightfall
- 3) Never let the bedding get damp
- 4) Make sure there are no drafts

For baby chicks:

Feed medicated crumble.

Water should have vinegar with mother.

For started chicks:

Feed pellets as per above.

Have clean water.

Have fresh bedding.

Special Instructions.

- 1) Observe your chicks closely. If they become lethargic they are in mortal peril. Increase the heat. Make sure the bedding is not damp. Add special tonic of 1/3 vinegar with mother and 2/3 water.
- 2) Interact with chicks. They should not be afraid of you. They will not necessarily come to you at first, but they should after a week or so. If it takes longer, be patient.
- 3) Make sure they birds are not fighting. Fighting will be evident if the birds are bleeding particularly if it is around the head area.
